Dear Mr. Kinsey:

Your proposal, received on November 15, 1982, to transport and dispose of ~~Silverline~~ wastes excavated in July has been reviewed by myself and John Aho. Our conclusions are as follows:

1. A composite barrel sample (WR72301-72306) analysis for metals indicates a nonhazardous waste;
  2. Individual soil samples (WR72309 and 72310) analysis for lead indicate nonhazardous wastes;
  - ✓ 3. A composite soil and uncured gel coat sample (WR72309-72311) analysis indicates a hazardous waste;
  - ✓ 4. An uncured gel coat sample (WR72311) analysis for lead indicates a hazardous waste.
  5. Out-of-state disposal of the nonhazardous wastes, represented by samples WR72301-72306, 72309 and 72310, at a permitted landfill is hereby approved. Prior authorization from the receiving state must be documented.
  6. The hazardous waste, represented by sample WR72311, must be handled according to Minnesota Hazardous Waste Rules, including proper manifesting and transporting. Prior approval from the receiving state is required.
- There is no provision in your proposal to substantiate that drying the gel coat and mixing it with concrete will render it nonhazardous. We have no objection to your use of this process to containerize the material for transport as a hazardous waste.

The State of North Dakota has approved disposal of these hazardous and nonhazardous wastes pursuant to Mr. Neil Knatterud's November 4, 1982 letter addressed to you (contingent on city of Fargo's approval). I request that you notify me prior to removal of the waste from Silverline.

If you have any questions related to this matter, please feel free to contact me at 612/297-2704.

Sincerely,

 11/28/82
